What Every Chemist Should Know about Patents, 3rd Edition
McLeland, Le-Nhung
American Chemical Society
2002  http://portal.acs.org/portal/PublicWebSite/about/governance/committees/WPCP_006903

A really useful pamphlet for anyone working in the industry or academia. It covers the fundamentals of U.S. patent law, including key changes introduced by the 1999 American Inventors Protection Act (AIPA) and key initiatives taken in late 2000 by the USPTO. A schematic diagram illustrating patent term calculation and a glossary of terms and acronyms are provided.
Contributed by E. Cheeseman & Cynthia Yang, June 2002

We have published a couple of dozen papers related to patent citation analysis (see our home page at http://www.chiresearch.com), and have constructed, for our own purposes, a bibliography of probably 50 other papers on the subject, including a stream of new papers coming out of the economics community.
